

INTAKE LOUVERS

The louvers are installed at the aspiration windows from the cooling tower to:

- Make easy the circulation of air through them.
- Avoid the growth of biological film in the water
- Prevent leaves, dirt, etc inside the basin
- Avoid splashing water, which in winter could cause ice to form around the tower
- Avoid the loss of water and expensive chemicals for its treatment
- Reduce the pressure drop

*We are pleased
to receive your
inquiry*
